

# T 807 series : *the touch-sensitive solution*

## ■ T 807 Touch-sensitive tempered-glass keyboard with key pad and touch pad

The T 807 allies keystroke comfort, design, and perfect hygiene. Thanks to its contact-free capacitive-effect technology (0 newtons), the lightest touch on the keys is enough to activate them. The keyboard can be disinfected with a simple gesture, and is resistant to all chemicals. Its built-in mouse frees the work surface from any element likely to be contaminated. It can be used while wearing gloves, is waterproof against splashes, has a locking function for cleaning, and is an effective tool in your fight against germs.

## ■ TH 807 Touch-sensitive tempered-glass keyboard with key pad and touch pad and hub

The TH 807 has the same specifications as the T 807. It adds a mini-USB port on the back of the keyboard, with a waterproof cap that allows you to use your keyboard as a peripheral: connect a hand scanner, a barcode reader, or an RFID tag reader to your tracking needs. These direct connections to the keyboard allow for remote operation of the central unit (placed outside the treatment room or operating room). Freed from the mouse and the central unit, your work station is even cleaner and more operational.

## ■ TH 807 RFID – built-in BlueLoc\* Touch-sensitive tempered-glass keyboard with key pad and touch pad and hub

The TH 807 RFID adds a BlueLoc system. With BlueLoc\*, you preserve the confidentiality of your work station. It allows for secured access by detecting the presence of the user thanks to their badge, making it possible to unlock the keyboard hands free. Similarly, when the user moves away from the keyboard, the session is secured with no need for specific action from the user. The BlueLoc solution allows for automatic identification of the user in their professional applications. The TH 807 RFID is particularly well suited for hospitals, and in all cases where confidentiality is required.

\* BlueLoc is a product of BlueLinea

### Specifications :

- «0 newtons» touch-sensitive keyboard: no pressure required, the lightest touch is enough
- Data entry surface in perfectly smooth 6mm-thick tempered glass
- Can be used with gloves
- Impervious to all disinfectants
- Guaranteed IP 65 waterproof
- Plug and play
